

SOSA

Project Documentation
by Justin Nguyen

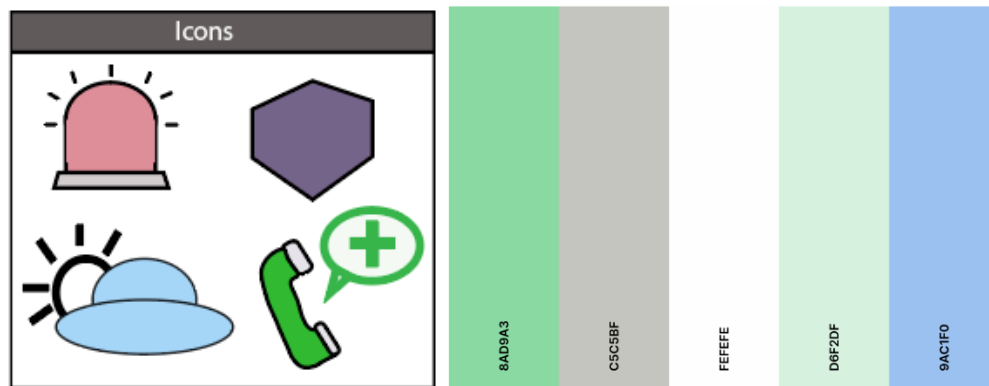

Summary, Definition, Purpose, Scope:

SOSA is a personal security app that tailors each user's protection plans based on factors like geographical location, local government stability, and personal profile. SOSA can detect through voice-activated safewords when the user is in an emergency situation to discreetly broadcast their location while sending an SOS to specified contacts and emergency services.

The User Interface is designed to be sleek, easy to use, but also with security and safety features like VPN, 2-factor protection and biometrics to protect user data at privileged locations.

Graphic Elements and Assets:

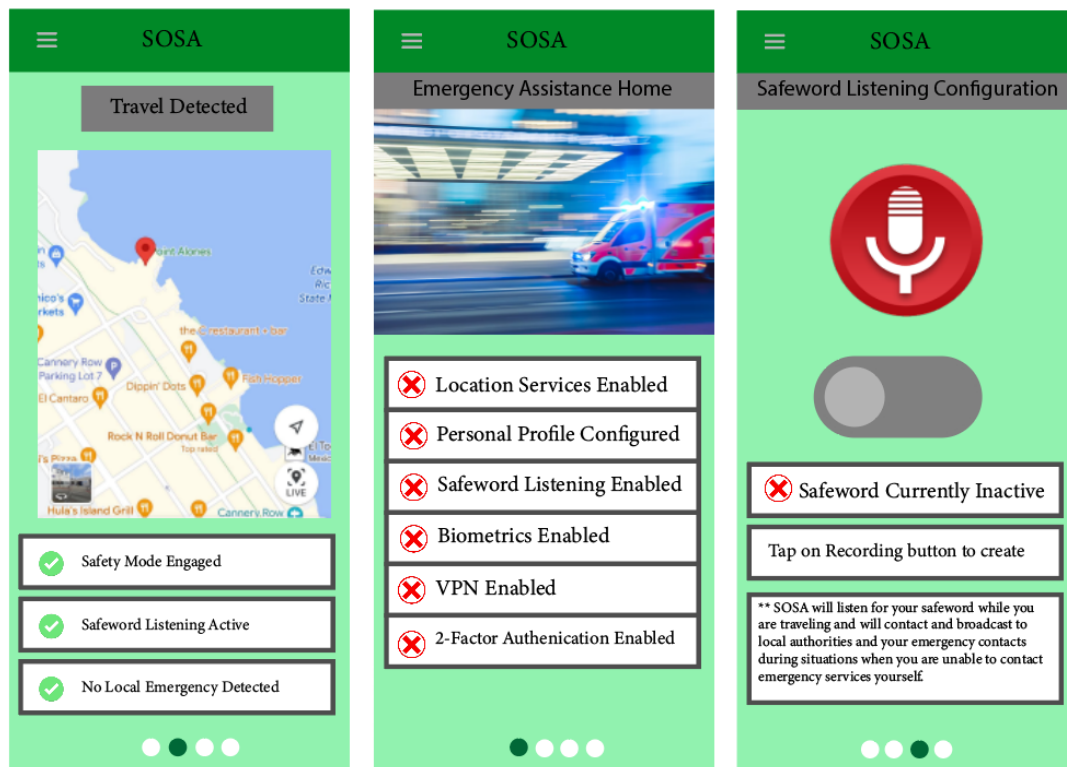

Software and main tools/features used:

Adobe Illustrator & Adobe XD

Lo-fi Wireframes:

Hi-fi interface design:

XD Prototype Link:

<https://xd.adobe.com/view/01d6f04f-628d-404b-848f-966b2fc380b2-5485/>

Record a video presenting and pitching the final app design as follows:

Video length shouldn't exceed five minutes,

Video file format MP4,

Use the project documentation slides (Google Slides, Keynote, PowerPoint, or PDF) to present your design process and final app interface,

Time distribution suggestion:

Short intro includes your name and the app name, (10 - 15 sec),

App concept and purpose, (30 - 60 sec),

Software and main tools/features used in the design, (20 - 30 sec),

Design process: sketching, lo-fi wireframes, hi-fi design, XD, color and typography choices rationale and purpose - (120 - 180sec),

Closing and thank you, (10 - 15sec).

- Compile all of the project files (scanned sketches, Illustrator, Photoshop, XD, images,...) in one compressed (zip) folder.
